

INTRODUCING... FIRE-RATED STRUCTURAL STEEL MEMBERS FOR 30, 60 & 90 MINS

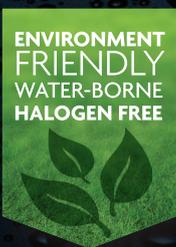

The difference between a fire that causes serious damage and one that causes a catastrophic loss of life is just a couple of minutes. By preventing fire from starting or spreading, FIRESHIELD's easy-to-install fire protection systems help save lives, buildings and items of value.

FIRESHIELD ArchitecturalWhite is water-borne, fire-rated intumescent coating, primarily for structural steel, to achieve a 30, 60 and 90 min fire rating. Being water-based, it is easy to apply and gives an excellent architectural, paint-like finish. It is environmentally friendly, with Declare Status (Red List free), and is very competitively priced.

FIRESHIELD ArchitecturalWhite can be used with over 30 approved steel primers and can be top-coated to achieve any colour finish from the approved top coats list, providing a tested and approved protection system.

Manufactured in Sweden under ISO14001, ISO9001 and a range of European green building certification schemes, FIRESHIELD products have been assessed and certified for Declare status under the Living Building Challenge scheme.

| | |
|----------------------|--|
| Water-based | 4 |
| Finish | Pigmented |
| Halogen-free/low VOC | 4 |
| For application to | Structural steel members and internal plasterboard linings |
| Top coat required? | 7 (Can be top-coated with colour required or if in a humid area such as a bathroom) |
| Compliance details | Tested to EN13881-4:2013 Certification, compliance and classification in accordance with AS4100:1998 and NZ3404:1997 Assessed to AS1530.4:2005, BS476:2009, and UK AFP Yellowbook 5th Edition. |

Declare. Red List Free

FIRESHIELD is part of the Living Future Declare system, an ingredient status program for building products. Our products are one of very few approved intumescent coatings. A Declare label answers three questions: Where does a product come from? What is it made of? Where does it go at the end of its life? This transparent platform and product database is changing the materials marketplace. Being Red List Free means our products are free of the most harmful environmental pollutants and toxins that are so prevalent in the building industry. For architects, designers and contractors, it makes the tiring materials specification process so much easier, providing a free resource to help make greener product selections for every project.
