

# DEFLOK™ RANGE IS HERE!

Aluminium head and glazing tracks have limited to no vertical deflection capabilities. DEFLOK™ gives these systems the ability to allow for +/- 35mm of vertical deflection whilst still maintaining all the lateral brace attributes of the standard TRACKLOK® range.

Additionally, traditional steel deflection tracks are a fantastic way to allow for +/- 20mm of vertical deflection, combined with DEFLOK™ you can achieve a huge 110mm (+/- 55mm) of total vertical deflection.

DEFLOK™ does not require prior assembly, it's a sealed unit that will not fall apart, bind or protrude into the glazing pocket. Use DEFLOK™ where large vertical deflection allowances are required.

The DEFLOK™ range includes:

- DEFLOK™ RETRO
- DEFLOK™ TIMBA
- DEFLOK™ VERT RETRO
- DEFLOK™ VERT TIMBA
