

RIPSTAAL KLICK-BOARD®

RIPSTAAL KLICK-BOARD®

THE RIGHT SHAPE IN ONE CLICK
WITH OUR INNOVATIVE DRYWALL

Ripstaal Klick-board® is an innovative type of drywall that is delivered horizontally. It quickly and easily lets you create the shapes you want thanks to its unique patented click profile.

Ripstaal Klick-board® is a prefab material that enables you to create outside corners in your renovation or new construction project and save a huge amount of labour!

The board is cut to size horizontally, then simply clicked together to form a lasting stable construction.

This makes it easy to create corners, column cladding, coves, housings, etc. One simple move and the desired structure is ready.

The corners are protected internally, meaning that you do not need to apply a corner guard.

Because the boards can be transported to the construction site horizontally, the loading capacity of the truck is used efficiently.

There is a range of Ripstaal Klick-boards® available for indoor and outdoor use (standard, hydro and outdoor drywall), each with a thickness of 12.5mm and available in various dimensions.

- **Ready-made for any desired finish**
- **Tight corners**
- **Quick and easy to prepare**
- **Save on materials and labour**
- **Smooth work flow on site**
